

SMART ATTENDANCE SYSTEM

Faculty of Business & Technology

DEVELOPED BY:

Md Muhaimenur Rhaman Washue (2503-1028) KHALLEFAH AMHIMMID

(2503-0729) Basheer Mohamed Basheer Bin Miskeo (2503-0879)

Loghan A/L Kantheeban (2503-0887) Islam Md Ariful (2503-1037)

AI-Powered Biometric Classroom Attendance Tracking (BIT4543)

THE CHALLENGE

MANUAL ATTENDANCE FAILS

- Time Lost** (5-10 mins/class)
- Proxy Attendance** (Students signing-in for absent peers)
- Large Halls** (Massive classrooms scale chaos)
- Error-Prone** (Missing names & manual entry typos)

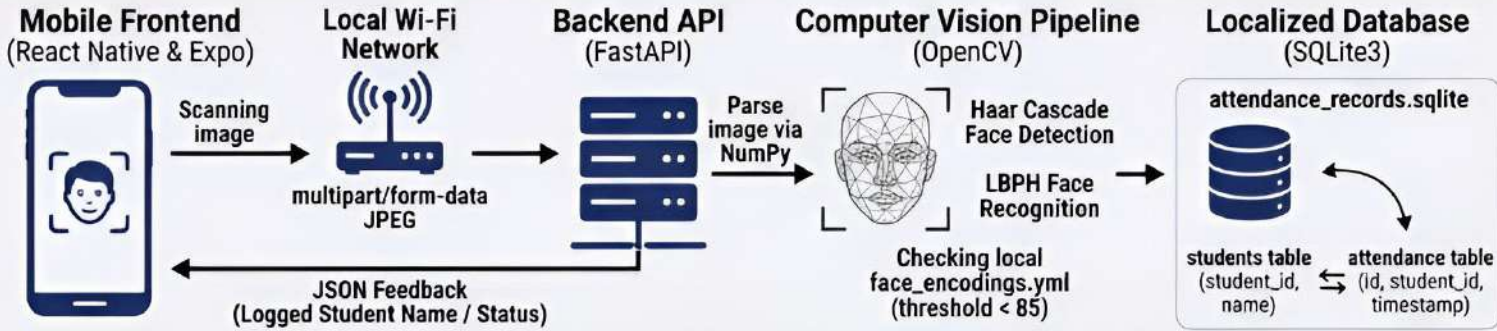

VS.

THE SOLUTION

AUTOMATED BIOMETRIC RECOGNITION

- 100% Biometric** (Facial recognition validates physical presence)
- Touchless** (Contactless non-intrusive scan)
- Automated** (Automatic timestamp logs straight to SQLite)
- Proxy-Proof** (Tamper-proof, blocks peer sign-ins)

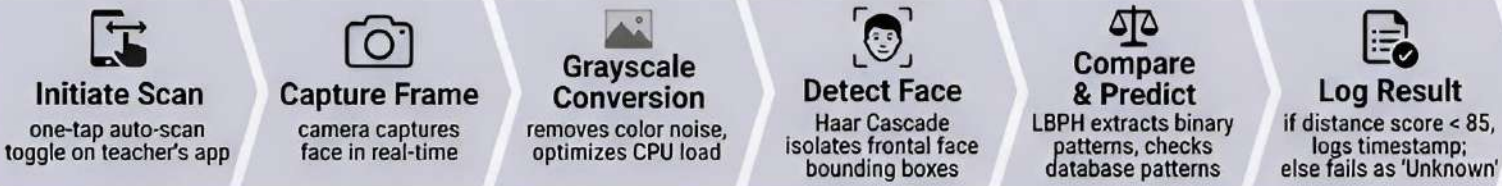

SYSTEM & SERVER ARCHITECTURE

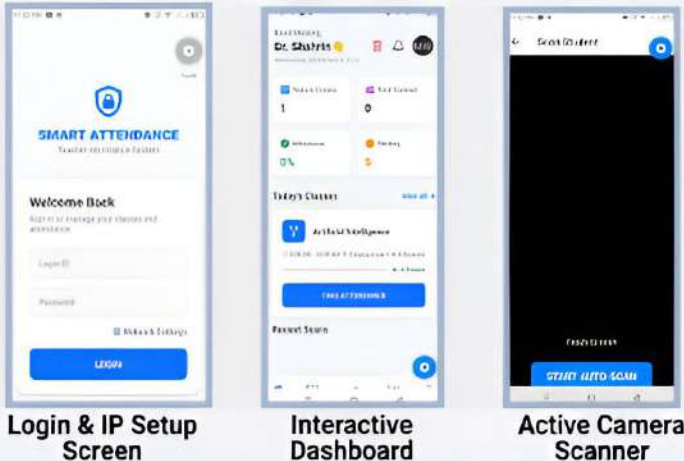

100% OFFLINE CAPABILITY

No cloud APIs or internet required during scans, protects biometric privacy, zero cost/maintenance, runs on a local standard router.

6-Step Recognition Pipeline

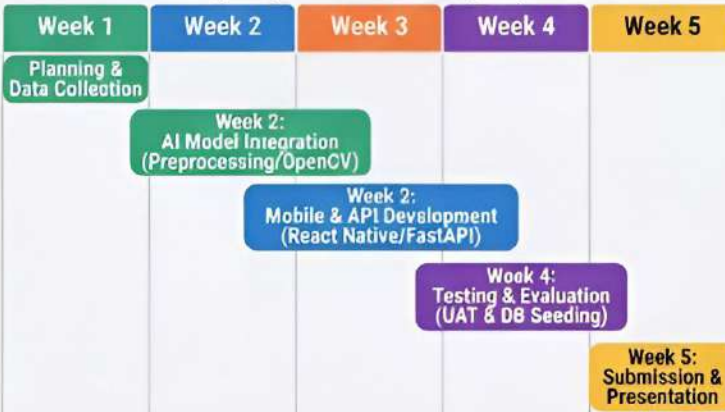

Educator-Centric User Interface

Project Timeline & Delivery

(adapted from <image 1>)

Key Takeaways: From roll call to smart attendance. Lightweight computer vision automates record-keeping and secures data integrity.
